

Pair Programming

You will never work alone again!

Naresh Jain
naresh@agilefaqs.com

What is Pair Programming ?

Video of a Sniper team working together

What did we see ?

- ☑ Two guys working on the same task
- ☑ Both have the same target
- ☑ Both have different expertise
- ☑ One executes the task
- ☑ The other watches for external factors, evaluates the situation, corrects him and validates success after execution
- ☑ Two guys working as a team

What is Pair Programming ?

src:ThoughtWorks India

Next line of code,
syntax, API,
class under dev

are we in the right direction?,
requirements, alternatives,
next test case,
impact

Driver

Navigator

Pairing
Station

Isn't it a waste ?

- ☑ Two developers will do the work of one
- ☑ Junior guys will slow down seniors
- ☑ Less work will get done
- ☑ My cost will double
- ☑ Why would I put two people on a job that just one can do?

How does it Help?

Continuous Review

Less Defects
Defects caught early

Improvement in the Quality of the Design

Better Problem Solving

More Economical

**“Pair-Pressure”
ensures timely delivery**

Rapid Hands-on Approach to Learning

Better Induction of new Team Members

Better Induction of new Team Members

Saved Effort on Intra- Team Documentation

**Less Distraction leading
to Higher Productivity**

Improved Satisfaction

Sustainable Pace:
Helps you slow down
and think

Better Team Building and Communication

Project Management: Risk Mitigation Strategy

We are in the business of building software and this process requires **craft and skill**, rather than a series of manual steps.

Programming requires lot of thinking, creating abstractions, figuring out the logic and trying out things.

An **evolutionary, iterative and collaborative** process.

Its a lot more than just typing code.
(Using the keyboard or even worse, using the mouse)

A Normal Pair Programming Video
<http://www.youtube.com/watch?v=q-QWdFa4awl>

Consider the following...

An experiment on Pair Programming
at University of Utah

Cost and savings

Cost and savings

Cost of fixing defects

Cost of fixing defects

“IBM reported spending about \$250 million repairing and reinstalling fixes to 30,000 customer-reported problems.

That is over \$8,000 for each defect!”

- “A Discipline for Software Engineering”, 1995, Humphrey, W.S.

Incorporating pair-programming into a software development process will help yield software products of **better quality** in **less time** with **happier, more confident** programmers!

Points of resistance

Things to watch out for...

Difficulty in convincing
stakeholders to let two
people work on one task

Everyone settles down
into a “Comfort Zone”
Pairing would disrupt it

Strong Code Ownership

People Who Don't Care

**Developers not involved
in Estimation and Planning**

Inconsistent Workstation Setup

Small Work Area (Cubicles)

Techniques of Pairing

Ping-Pong Pairing

Keyboard n Mice Pairing

Selective Pairing

Cross functional Pairing

Distributed Pairing

Tips n Tricks

Pairing Stations

Pair Rotation with Pair Hinging

Promiscuous Pair Programming

Pairing Round

Pair Stairs

Spikes

Pairing Smells

Things to Watch out for...

Pair Programming Anti Patterns Video
<http://www.youtube.com/watch?v=ReuFZYtGeCc>

No Pair Rotation

Only one person driving
Distracted Pair

Selective Pairing closer to a Release

Manager decides the Pairs

When its not necessary?

- ☒ Tasks which involve Mundane Work (may be)
- ☒ Trivial bug fixes like Typos
- ☒ One person in the Pair is Sick

F.A.Q.s

- ☑ How do you do estimation? Its 2 people working on one task now.
- ☑ How do you do performance reviews for individuals?
- ☑ Can we keep it optional for some people on a team?
